

The Agency Advantage also works well for agencies with multiple locations who want to connect their locations together in a Wide Area Network using Microsoft Windows Server operating systems with Terminal Services. Customer and accounting information may be organized by location with reports available by location or combined for the entire agency.

The Agency Advantage is also offered as a hosted application running on servers in our secure data centers. This is an excellent way to get started with multiple locations without the expense and additional network management required for operating a wide area network.

Please contact a sales representative for more information on multi-location operation.
